

Health

General Objective

Children and families at social risk receive psychosocial and health support through promotion, prevention, and intervention activities in order to improve their quality of life during 2025.

Key Achievements

1. Immediate Attention for Special Cases

During 2025, six special medical cases were identified and attended immediately. Beneficiaries received accompaniment, referrals, and follow-up care through different health institutions. Cases included suspected pregnancy, fractures, neurological problems, dental complications, skin conditions, and suspected sexually transmitted infections. All cases received complete medical attention through public insurance (SIS) or private care, achieving a 100% response rate.

2. Healthy Family Program

Seven beneficiary families were identified with deficiencies in hygiene and household organization. Five families actively participated in workshops focused on home cleanliness, personal and oral hygiene, and shared household responsibilities. Two families could not fully participate. One of them due to limited availability and the other family due to lack of interest. Positive changes were observed in participating households, including cleaner living environments and improved waste management practices.

3. First Aid and Emergency Response

A total of 75 first aid cases were attended during 2025, including injuries from falls, headaches, fever, stomach pain, dental pain, fungal infections, nosebleeds, sore throats, and dog bites. Most injuries occurred among younger children during recreational activities. Increased cases of fungal infections were observed during November and December.

4. Oral Health Program

A total of 110 children were enrolled in the oral health program, and 107 actively participated in preventive and treatment activities.

- 97 children participated in supervised brushing and oral hygiene education sessions.
- 10 children received dental treatment for advanced cavities in coordination with a partner dental clinic and with parental consent.

Dental evaluations showed that many children required extensive treatment, averaging between 9 and 11 affected teeth per child. Eight children completed their dental treatment successfully, while two discontinued due to fear caused by previous dental experiences.

The program contributed to stronger oral hygiene habits and greater awareness of preventive care.

5. Sexual Education Program

Twenty-eight sixth-grade students enrolled in the sexual education program, and 22 completed the workshops successfully. Four educational sessions addressed Human development stages, Puberty and adolescence, Physical and emotional changes, Menstruation and reproductive organs and Personal hygiene during adolescence.

At the beginning, many participants showed fear and embarrassment discussing these topics, but over time they became more confident and engaged. Parents also expressed appreciation for the workshops, noting the difficulty of discussing these topics at home.

Additional Youth Workshops

Special sexual education workshops were also organized for young people aged 17–23 participating in the vocational training program. Topics included reproductive health, sexually transmitted infections (STIs), and contraceptive methods. The workshops promoted informed and responsible decision-making regarding sexual and reproductive health. In general youngsters are very interested and are happy with our open communication about these topics.

Monitoring and Impact

Results were monitored continuously through weekly observations, attendance records, and evaluations before and after educational sessions. Improvements were observed in children's oral hygiene, personal hygiene, self-confidence, and healthy decision-making.

Collaboration with Institutions

The program worked in coordination with several institutions, including:

- KARIDENT Dental Clinic
- San Miguel Arcángel Pediatric Clinic
- Regional Hospital of Ayacucho
- Hospital de la Solidaridad
- Vista Alegre Health Center
- Yanama Health Post

These partnerships strengthened trust among families and expanded access to specialized healthcare services.

Achievements and Positive Outcomes

The health team observed significant progress throughout the year. Children increasingly approached the health area independently for oral hygiene support, and participating families demonstrated continuous improvements in household cleanliness and healthy living practices. Educational materials and playful learning methods were especially effective in encouraging healthy habits among children.

Areas for Improvement

The team identified the following areas for further development:

- Strengthening decision-making processes
- Improving annual planning and organization
- Expanding educational workshops for different target groups
- Creating separate groups within the sexual education program according to age and needs

Future Plans

Key priorities for the coming year include:

- Expanding health education workshops
- Strengthening partnerships with clinics, hospitals, and professional organizations
- Increasing preventive health activities
- Developing formal cooperation agreements with medical institutions and professional associations

The organization recognizes the importance of continued collaboration with external institutions to improve healthcare access and strengthen family trust in the program.

Annual Social Area Report – 2025 Summary

General Objective – Wellbeing Program

NARS and families at social risk received support through a bio-psycho-social approach focused on promotion, prevention, and intervention in order to improve their quality of life during 2025.

This objective was achieved through coordinated work between the social, psychology, and health areas, providing comprehensive support to children and families. Activities included individual counseling, emotional support, family interventions, mental health promotion, and safe spaces where children and families could freely express and manage their emotions.

Creative and recreational activities such as games, crafts, painting, and socio-emotional workshops were used to strengthen imagination, teamwork, frustration tolerance, emotional regulation, communication, and healthy coexistence. The “Rock and Water” workshops further supported body awareness, self-control, confidence, and peaceful conflict resolution.

Together, these activities contributed significantly to the emotional and social wellbeing of participating children and families.

Family Festival

The Family Festival strengthened emotional bonds between children and their families by creating moments of joy, recreation, and healthy interaction. Parents and children actively participated in activities that promoted communication, unity, and mutual respect.

One challenge was partial attendance due to work obligations, as well as difficulties with punctuality among some families.

Counseling and Guidance

During 2025, counseling and guidance services were successfully provided to families and NARS according to their specific needs.

- The social area attended 12 families.
- The psychology area accompanied 11 families.
- The health area supported 10 families.

Many women approached the social area primarily seeking a safe space to be heard and emotionally supported. In several cases, emotional containment and orientation alone helped them feel calmer and more capable of addressing their situations independently.

Adolescents also voluntarily sought support related to relationships, emotional confusion, heartbreak, and peer conflicts. Through mediation and dialogue, many learned to resolve conflicts respectfully, apologize, and strengthen emotional awareness.

Emotional Self-Care and Creative Activities

More than 100 children regularly participated in creative and recreational activities aimed at strengthening emotional, cognitive, and physical self-care.

Children engaged enthusiastically in crafts, drawing, games, and cooking activities. Through these experiences they learned:

- Emotional regulation
- Frustration management
- Teamwork and empathy
- Respectful coexistence
- Perseverance and self-confidence

Many children demonstrated significant growth in patience, impulse control, and emotional expression. Activities also encouraged generosity and care for others, as some children chose to save and share what they created with younger siblings.

Socio-Emotional Skills Program for Sixth Grade Students

A socio-emotional intervention program was implemented with sixth-grade students between September and December 2025.

The program addressed inappropriate peer interactions, boundary violations, confusion about relationships, and emotional discomfort observed among students. Safe dialogue spaces allowed children to openly discuss their feelings, doubts, and experiences.

As a result:

- Students developed greater respect for personal boundaries.
- Empathy and emotional awareness increased.
- Girls especially showed greater self-confidence and assertiveness.
- Children learned the difference between friendship, attraction, dating, and marriage appropriate to their developmental stage.
- Harmful misconceptions related to relationships and sexuality were clarified.

The intervention contributed to healthier interactions and stronger emotional skills among participants.

Social Case Management

During 2025:

- 20 social cases were attended.

- 17 were family cases and 3 were individual cases.
- 12 cases were successfully closed.
- 8 cases will continue receiving intervention during 2026.

Some cases could not achieve their objectives due to limited family participation caused mainly by work responsibilities.

Positive Impact on Children

Children attending Mama Alice demonstrated stronger emotional and social development compared to peers outside the program.

Observed improvements included:

- Better emotional regulation
- Increased self-esteem and confidence
- Greater ability to communicate discomfort and establish boundaries
- Improved respect for rules and coexistence
- Stronger social skills and empathy
- Healthier childhood development without assuming adult responsibilities prematurely

Special Activities

Movie screenings and karaoke activities became powerful tools for emotional connection and learning. Children especially connected with songs from the movie “K-Pop Demon Hunters,” creating joyful and emotionally meaningful moments that strengthened trust, participation, and group cohesion.

These activities also promoted discussions about friendship, perseverance, respect, and shared joy.

Rock and Water Program

The Rock and Water program was implemented in partnership with two schools and reached 174 students.

Topics included:

- Breathing and concentration techniques
- Emotional regulation
- Self-control and self-awareness
- Respect and boundaries
- Peer pressure
- Trust and body language
- Healthy relationships

The program significantly strengthened students' self-esteem, emotional regulation, teamwork, empathy, concentration, and conflict prevention skills. Participants learned practical tools to establish healthy boundaries, recognize bullying dynamics, and apply emotional self-regulation strategies in daily life.

Collaboration with Institutions

The social area coordinated with multiple educational, health, legal, and community institutions, including:

- Local schools
- Health centers
- Regional Hospital of Ayacucho
- Women's Emergency Center (CEM)
- Municipal child protection services (DEMUNA)
- Public prosecutors and family support institutions

This network strengthened comprehensive support and referral opportunities for children and families.

Achievements

The social area is especially proud of:

- Building strong trust relationships with children and families
- Strengthening children's emotional regulation and self-esteem
- Promoting gender equality and inclusive participation
- Encouraging creativity, empathy, and respectful coexistence
- Improving interdisciplinary teamwork and case coordination
- Strengthening family support and early risk detection
- Improving intervention tools and professional collaboration

Areas for Improvement

The team identified several priorities for improvement:

- Better task delegation and activity follow-up
- Stronger documentation and written evaluations
- Improved organization of case files and databases
- Expanded use of social and educational games
- More structured case socialization processes

Priorities for 2026

Key plans for next year include:

- Additional professional training for staff
- Workshops on grief, emotional detachment, and healthy boundaries
- Soft skills programs for children
- Expanded self-care workshops
- Group family workshops involving all family members
- Improved data management and intervention monitoring systems

The organization remains committed to providing comprehensive emotional and social support that strengthens the wellbeing, resilience, and healthy development of children and families.

GASTRONOMY PROGRAM – 2025

Annual Summary Report

General Objective

The Gastronomy Program aims to help young people learn a professional trade while strengthening their social behavior, personal development, and future opportunities for employment and self-improvement.

The program combines intensive culinary training with personal guidance, emotional support, and real-life work experience. Throughout the year, students not only learned how to work in a professional kitchen, but also developed resilience, confidence, responsibility, and the ability to overcome personal challenges.

Specific Objectives – 2025

1. Strengthen social behavior and personal development

Throughout the year, students participated in workshops focused on emotional development, communication, teamwork, self-esteem, conflict resolution, and healthy boundaries. The “Rock and Water” program also helped students improve self-awareness, emotional regulation, and confidence.

The first months were challenging. Many students struggled with homesickness, insecurity, and adapting to communal living. Some difficulties included disrespectful behavior, breaking dormitory rules, hidden alcohol consumption, and conflicts between students. However, through consistent guidance, emotional support, and patient accompaniment, significant growth became visible in most students.

Several students who initially arrived withdrawn, insecure, or emotionally distant gradually became more confident, expressive, and socially connected. Others learned to take responsibility for their actions, reflect on their choices, and develop healthier relationships with peers and authority figures.

One of the most emotional achievements of the year was seeing students who once doubted themselves begin to believe in their own abilities. Some students who barely spoke at the beginning eventually presented final projects with confidence, led group activities, or successfully completed internships in demanding professional kitchens.

Although not every challenge was fully resolved, important progress was achieved in areas such as:

- Self-esteem and confidence
- Emotional expression

- Respectful coexistence
 - Teamwork and communication
 - Responsibility and resilience
 - Setting healthy boundaries
 - Leadership and initiative
-

2. Develop professional culinary skills

Most students successfully acquired the technical skills expected from an entry-level cook. Through continuous practice, they learned:

- Knife skills and food handling
- Mise en place organization
- Cooking techniques
- Team coordination during service
- Hygiene and food safety
- Working under pressure
- Plating and presentation

Students showed different learning rhythms and strengths. Some excelled technically and worked quickly, while others stood out for organization, discipline, creativity, or teamwork.

Because training was highly practical from the first weeks onward, students gained real experience early in the program. The restaurant “QuinoaQ” became a key training environment where students practiced in real service conditions and learned how to manage stress, timing, and customer interaction.

Several students demonstrated remarkable personal growth alongside technical improvement. Students who initially feared making mistakes gradually became capable of handling professional responsibilities in real restaurants.

Chefs from internship restaurants consistently highlighted the strong preparation, discipline, and adaptability of the students compared to trainees from other institutions.

At the end of the program:

- 18 students successfully completed the full training process.
- 12 graduates quickly found employment in restaurants.
- Multiple students received direct job offers from their internship locations.

3. Ensure all students complete professional internships

100% of the students who completed the program participated in professional internships.

The internships took place in two stages:

a. QuinoaQ Restaurant Internship

All students completed extensive practical training at QuinoaQ restaurant, accumulating approximately 576 hours of experience.

There, students learned:

- Teamwork during real service
- Kitchen organization
- Problem-solving under pressure
- Customer interaction
- Time management
- Food preparation and beverage service
- Confidence in professional environments

The teaching approach at QuinoaQ focused not only on technical learning, but also on patience, encouragement, and human connection. Students were allowed to learn through mistakes while receiving continuous support from the chefs and staff.

Many students later described QuinoaQ as a second home.

b. Internships in Restaurants in Huamanga

Students also completed intensive internships in several restaurants across Huamanga, including:

- Takuchi Buffet
- Wayra Kusi
- Alfredo Fusión
- Fusiones
- Tomasino Pizzería
- La Caleta del Pescador

- Puerto Qamka Fusión
- Altipacha
- Manú Cevichería
- La Chola
- Via Via

Restaurant owners and chefs welcomed the students warmly and repeatedly expressed appreciation for their preparation, discipline, and commitment.

Many students adapted successfully to demanding kitchen environments and gained confidence through these experiences. Several restaurants later offered employment opportunities to graduates after observing their performance.

Student Participation

- Total enrolled students: 31
 - 20 male students
 - 11 female students
- Students with regular attendance: 23
 - 15 male students
 - 8 female students
- Students who completed the full program: 18
 - 13 male students
 - 5 female students

Some students left the program due to health issues, personal decisions, disciplinary situations, or lack of vocational interest. In several cases, leaving the program represented an honest and mature decision about their future path.

Why Mama Alice Students Stand Out

Students from Mama Alice demonstrate stronger results because the program combines:

- Technical culinary training
- Personal and emotional development
- Intensive practical experience

- Real restaurant service from the beginning
- Boarding school discipline and responsibility
- More than 50 hours of weekly training

Living away from home for eight months required students to develop perseverance, resilience, emotional strength, and independence.

Restaurant chefs consistently reported that Mama Alice students:

- Adapt faster
- Make fewer mistakes
- Show stronger discipline
- Work better under pressure
- Demonstrate higher levels of responsibility

This practical and human-centered approach prepares students not only for employment, but also for life.

Family and Institutional Collaboration

The program maintained continuous communication with parents and guardians through:

- WhatsApp groups
- Phone calls
- Home visits when necessary

Families expressed gratitude for the emotional support, guidance, and close follow-up provided throughout the year.

The program also collaborated closely with local restaurants that served as internship centers, creating valuable professional networks and opportunities for the students.

Students facing psychosocial challenges such as alcohol consumption, depression, trauma, or emotional difficulties were referred to psychological support services when needed.

Achievements and Highlights

The team is especially proud that:

- 18 students completed the program successfully.
- Many students developed strong technical and professional skills.

- Students showed major growth in confidence and emotional maturity.
- Several graduates obtained employment immediately after graduation.
- Students adapted successfully to eight months of boarding school life.
- Many students overcame fear, insecurity, family difficulties, or health challenges.
- Students developed resilience, discipline, and perseverance.

One particularly inspiring example was Johanes, a student with speech difficulties who, through determination and hard work, became one of the strongest performers in the group. After graduation, he was hired by Alfredo Fusión, where the chef expressed that he could eventually become a head chef if he continues developing professionally.

Another emotional moment occurred during graduation, when several students became emotional while saying goodbye. Some jokingly said they did not want to leave because QuinoaQ had become their home.

A small group of graduates even shared their dream of opening their own restaurant together in the future — a powerful reflection of the hope, friendship, and ambition that grew throughout the program.

Challenges:

- Different academic levels among students
- Cultural differences and personality conflicts
- Frequent chef changes during the first months
- Hidden alcohol consumption
- Limited communication in some cases between instructors and social support staff
- Difficulty building deep trust with certain students
- Need for more internal coordination meetings among staff

These experiences provided important lessons that will strengthen future editions of the program.

Current Situation of Graduates

Currently, 12 graduates are already working in restaurants in Ayacucho, Huamanga, Lima, and other regions.

- The other students follow different paths as they take their next steps towards an independent future. One student continued his professional development by enrolling in a culinary programme in Lima, further strengthening the skills and experience gained during his training with us.
- Several other students chose to pursue studies in different fields. At the same time, they are currently working as cooks, using the vocational skills they acquired at Mama Alice to earn an income and finance their further education. This is a valuable example of how practical vocational training can provide young people not only with a profession, but also with the means to pursue new ambitions and educational opportunities.
- One former student is currently unable to work in the restaurant sector due to health problems. We remain in contact and hope that, when circumstances allow, this student will once again be able to make use of the skills acquired during the training.

Several graduates continue dreaming of building their own businesses and careers in gastronomy.

The program has not only trained cooks — it has helped young people discover their value, regain confidence in themselves, and imagine a future filled with possibility.

Psychological Support and Family Well-being

In 2025, Mama Alice continued to provide psychological support to children, adolescents and families facing difficult social and family circumstances. The Psychology Department combined individual therapy and counselling with preventive activities, creative programmes and support for parents. The aim was not only to respond when problems arose, but also to strengthen emotional resilience, family relationships and the skills children and parents need in everyday life.

Individual psychological support

During the year, 14 children, adolescents and adults received individual psychological support. The cases referred to the psychologist were often complex and included anxiety, depression, behavioural difficulties, family conflict, domestic violence, substance abuse, learning difficulties and experiences of abuse. Some required urgent and intensive intervention.

Despite the complexity of these situations, important progress was made. Eleven clients were able to complete their therapeutic process after showing clear improvements in their emotional and psychological well-being. Improvements included better emotional regulation, fewer behavioural problems, greater self-confidence and better functioning at home and at school. Two cases required longer-term support and continued into the following period.

In addition to therapy, 11 children, adolescents and parents received psychological counselling. Parents most frequently sought advice about raising their children, setting boundaries, changes during adolescence and dealing with separation within the family. Adolescents also approached the psychologist voluntarily to talk about friendships, relationships, conflicts with peers and difficulties at home.

One of the challenges remained involving parents consistently in the therapeutic process. Work obligations and difficult economic circumstances often make regular attendance difficult. Nevertheless, many mothers in particular became actively involved and practised at home what they had learned during counselling and therapy.

A safe place to grow

Psychological well-being is supported not only through therapy. Every week, more than 30 children and adolescents participated in recreational, cognitive and creative activities organised by the Psychology Department.

Board games, puzzles and group activities helped strengthen attention, memory and concentration, while drawing, painting, dancing, outdoor activities and handicrafts provided opportunities to relax, express emotions and develop creativity. Just as importantly, children practised sharing, respecting others, following rules, making their own choices and solving problems independently.

The changes became increasingly visible during the year. At first, many children quickly said that activities were “too difficult” and continuously asked adults for help. Others struggled with sharing materials, waiting their turn or respecting each other's work. Gradually, they became more independent and confident and took responsibility for cleaning up and caring for the materials themselves.

A particularly touching example occurred when a new girl became frustrated during a handicraft activity because her work did not turn out as she had hoped. Before an adult needed to intervene, other children gathered around her and reassured her: mistakes were normal, she was still learning, and what mattered was that she had made it herself. Their spontaneous reaction showed that lessons about patience, respect and self-worth had become part of the way they treated one another.

Working with mothers and families

Supporting a child also means supporting the family around them. During 2025, Mama Alice therefore continued its workshops for mothers on positive parenting and emotional self-care.

Topics included respectful parenting, managing emotions at home, setting healthy boundaries, children's use of screens and time, stress management and self-care. The workshops were highly practical and interactive. Mothers were encouraged to share experiences, questions and concerns in an environment where they felt safe and supported.

Of the 16 mothers invited, eight attended every workshop throughout the programme. For others, regular attendance was difficult, particularly because many work informally, travel to rural areas for work or face economic pressures that make it impossible to attend every meeting.

The impact of the workshops was also visible at home. Children told us that their families were using practical tools introduced during the sessions to organise screen time and talk about emotions. One child proudly explained that she and her mother used the “emotional traffic light” every day. For some mothers, the workshops were also a rare opportunity to focus on their own well-being. After a relaxation exercise, several mothers commented that they never had activities like this for themselves and that they had really needed it.

Family Festival

At the end of the year, the Psychology, Social Work and Health Departments jointly organised the Family Festival. Ten families were invited in recognition of their commitment and the progress they had made during the year.

Through games and family activities, parents and children demonstrated what they had learned about emotions, communication, respectful parenting and living together. The participating families included children who had initially struggled with anxiety,

behavioural or learning difficulties, or difficult family situations. By the end of the year, improvements could be seen not only in the children, but also in the way family members communicated and interacted with one another.

For us, this is an important measure of success. Psychological support should not remain inside the consultation room. Its real value becomes visible when children feel safer, parents respond differently, communication improves and families develop tools they can continue to use independently.

Looking ahead

In the coming year, Mama Alice aims to continue and strengthen psychological support for vulnerable children, adolescents and families. An important priority will be practical workshops for parents and children, providing tools that families can continue to use even after Mama Alice is no longer working directly in their community.

The Psychology Department also plans to provide training for the Mama Alice team, helping staff strengthen their knowledge and their ability to support beneficiaries in different contexts. In addition, greater attention will be given to staff well-being through workshops on self-care, stress management, communication and teamwork.

Ultimately, the aim is not simply to solve individual problems, but to help children and families become stronger, more confident and better equipped to face future challenges independently.

ANNUAL EDUCATION REPORT – 2025 (YANAMA)

Summary in English

General Objective

Children and adolescents improve their academic performance and autonomy through participation in educational activities in Yanama by the end of 2025.

This objective was **largely achieved**, as many children showed clear progress in learning, behavior, and independence, supported by a holistic educational program.

1. Academic Performance Objective

Target: 70% of regularly attending children achieve passing academic performance.

Result

- Total regular students: **243**
- Improved and promoted without failing: **202 (83%)**
- Sent to recovery program: **41 (17%)**
- No failures reported after final evaluation stage.

👉 **Conclusion:** The objective was **exceeded (83% vs 70%)**.

Main Learning Difficulties Identified

A) Early Childhood (Ages 4–5)

Children showed difficulties in:

- **Language:** weak communication, unclear pronunciation, difficulty expressing emotions
- **Motor skills:**
 - Fine motor: weak pencil grip, difficulty cutting or coloring
 - Gross motor: balance issues, difficulty jumping, running, climbing
- **Attention:** easily distracted, difficulty following instructions
- **Socio-emotional skills:** impulsivity, frustration, difficulty sharing and following rules
- **Numeracy (dyscalculia):** difficulty recognizing numbers

Interventions

- Language stimulation (songs, storytelling, breathing exercises)
 - Fine motor activities (clay, cutting, coloring)
 - Gross motor games (obstacle courses, dancing)
 - Cognitive games (puzzles, memory games)
 - Emotional education (rules, values, puppet theatre)
 - Math games (shops, restaurants, counting games)
-

B) Primary Education

Main difficulties:

- Reading fluency and comprehension
- Confusion of syllables and words
- Writing errors (capital letters, reversed numbers)
- Poor understanding of punctuation
- Weak math problem-solving skills
- Low attention and concentration

Interventions

- Reading programs and storytelling
- Dictation and spelling practice
- Math exercises on board and worksheets
- Use of dictionaries and reading comprehension books
- Educational games (crosswords, sudoku, puzzles)
- Individual and group reinforcement sessions

👉 Result: Strong improvements in literacy and numeracy.

Individual Education Program

- 20 children supported individually
- 18 successfully improved
- 2 still in progress due to family and attendance challenges

👉 Emotional note: Some children faced difficult home situations, which affected learning progress.

C) Secondary Education

Challenges:

- Mathematics (algebra, geometry, reasoning)
- Chemistry and biology difficulties

Interventions:

- Practice worksheets and sudoku exercises
 - Individual tutoring
 - Science reinforcement using books and internet
 - Support for projects and science fairs (Eureka)
-

Special Activities

Festival of Attention & Concentration

- ~190 children participated
- Games for memory, logic, coordination, and problem-solving
- 👉 Result: Improved focus, teamwork, and cognitive skills

Digital Learning Sessions

- 55 children participated
 - Weekly use of digital boards for interactive learning
 - 👉 Result: Better engagement with technology
-

2. Creativity Objective

Target: 60% creativity development

Result:

- 62% (150 children) actively participated

Activities:

- Handmade crafts (cards, decorations, seasonal art)

- Painting and texture techniques
- Masks and creative expression projects

Kite Festival

- 198 children participated
 - Strong family involvement
 - 👉 Emotional highlight: parents and children shared joyful moments flying kites together
-

3. Autonomy Objective

Target: 50% autonomy development

Results:

- 42% fully autonomous (103 children)
- 38% in progress (92 children)
- 20% starting stage (28 children)

👉 195 children showed progress in autonomy

Activities:

- Daily routines (hygiene, responsibilities)
- Classroom duties (materials, attendance)
- Emotional trust-building conversations
- Games and decision-making activities

👉 Children gradually became more independent and confident.

4. Enrollment and Attendance

Total enrolled: 341

Regular attendance: 243

5. Academic Results Comparison

Regular attending students:

- Passed without issues: **202 (83%)**
- Recovery program: **41 (17%)**
- No failures

👉 Conclusion: Children in the program show **significantly better outcomes due to full support (education, emotional care, social work, psychology, and individual reinforcement)**.

6. Evaluation System

- Initial test (start of year)
- Final test (November)

Progress:

- Students in “Achieved” category increased from **62 → 164**
- Students in “Beginning level” decreased significantly

👉 Clear overall academic improvement across all levels.

7. Special Projects

“I CAN READ AND WRITE” PROJECT

- 210 children participated
- 4-month literacy program

Activities:

- Storytelling by teachers and students
- Creative writing of stories
- Final presentations of selected stories

👉 Emotional result:

Children gained confidence, overcame fear of public speaking, and discovered creative talent.

Free Reading Space

- Open reading environment with diverse materials
- Encouraged voluntary reading and curiosity

8. Family and Community Involvement

- Strong communication via meetings, WhatsApp, and phone calls
- Parents supported activities (crafts, outings, healthy food events)
- Cooperation strengthened trust and child development

9. External Cooperation

- Coordination with local school in Yanama
- Support from community organizations
- University students supported Christmas activities
- Health and social referrals for a few children

10. Highlights & Achievements

- Strong academic improvement (83% success rate)
- Increased creativity and reading habits
- Strong teamwork among teachers
- Positive emotional environment for children
- Use of digital learning tools
- Active parental involvement

11. Areas for Improvement

- Better scheduling coordination among staff
- More consistent evaluation planning
- Stronger coordination with schools
- Better integration of school calendar disruptions

12. Future Plans

- Strengthen autonomy and creativity

- Improve reading comprehension and spelling
 - Expand digital learning sessions
 - Reduce shyness in public speaking
 - Develop new entrepreneurship activities
-

13. Emotional Closing Highlights

The report also includes touching reflections and stories from children, showing:

- Growing confidence and joy in learning
- Strong emotional bonds with educators
- A safe, family-like learning environment
- Personal growth beyond academics

One clear message runs through the entire year:

Children not only learned better — they felt seen, supported, and valued.
